PermaGuard-liteSM
solid safety cover

Stronger, More Durable and Lighter Than Ever.

PermaGuard-Lite Solid Safety Covers

All covers are CUSTOM DESIGNED and are optimally constructed to withstand the added stress unique to solid covers. The use of the MEYCODEX™ design system ensures a proper fit and unique protection.

- Fabricated using specially designed, light weight vinyl material that can lay as taught as a mesh but stay as strong as a solid.
- PermaGuard-Lite is specially formulated for added protection against U.V rays, mold & mildew.
- Supported by Meyco's unique, ultra-slim, lightweight criss-cross webbing for superior break strength- **OVER 34% STRONGER THAN SOME OTHER BRANDS**

- PermaGuard Solid Covers are available as SELF DRAINING or designed to require an AUTOMATIC PUMP.
- SPECIAL ABRASIVE PROTECTION STRIPS are sewn on the underside to protect each strap against wear at the coping edge.
- STAINLESS STEEL SPRINGS secure the cover to a series of SOLID BRASS anchors which can be set flush with the deck when not in use.
- Patented POLYGARD™ edging materials can be used, when necessary, to form a snug fit against irregular surfaces.
- UL Classified.
- MADE IN THE USA

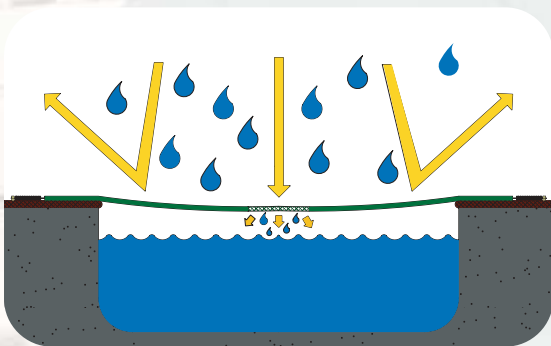

Worry Free Drainage

When water levels are properly maintained, the PermaGuard-Lite will drain all year long with little chance of clogging. Enjoy the most maintenance free Solid Safety Cover around.

Drain Technology

A specially designed Mesh strip (Meyco's Rugged-Mesh) placed down the middle of the cover allows maximum drainage with minimal U.V. and debris exposure.

U.V. rays are significantly reduced by the opaque vinyl material and Meyco's Rugged-Mesh. The Rugged-Mesh will allow water to drain over a larger portion of the cover while minimizing debris and sunlight.

Available from:

Even with major obstructions and limited deck, the PermaGuard Solid Cover above, lays taught and ready to drain. PermaGuard Solid Covers without the built in drain are also available.

Alternative Drainage

The PermaGuard-Lite Solid Safety Cover is available without the self draining system and would require an Automatic Pump supplied by Meyco. In order to meet ASTM Safety standards, an automatic pump must be put on the cover to keep the standing water off of the cover.

Compared to the typical solid safety cover

- **40%** or more seam stress strength for overall durability
- **20%** more puncture resistant reduces potential for holes
- **22%** or more tensile strength reduces wear and tear
- **35%** higher tear strength
- Almost **1/3** lighter
